

# A Friendly Notice about Invasive Plants

It appears your property may contain  
**Wild Parsnip**

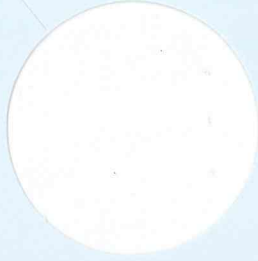

Bugwood.org © 2007 The Regents of the University of California

**Invasive plants** are aggressive non-native species that reproduce rapidly, outcompete native species, and can negatively impact agriculture, industry, recreation, forestry, human health, and the environment. Invasive plants may be introduced unintentionally, as hitchhikers on clothing, gear, or equipment, or unknowingly, often for ornamental purposes.

This notice is part of the early detection, response, and monitoring plan for the **Adirondack Park Invasive Plant Program** whose mission is to protect the region from the negative impacts of invasive species.

For more information contact the  
Adirondack Park Invasive Plant Program  
518-576-2082, P.O. Box 65, Keene Valley, NY 12943
